

XpressWay[™] 3.0

PARALLEL MILKING PARLOUR

WITH FAST EXIT

XpressWay™ 3.0

COPIED BUT NEVER EQUALLED*

3 GENERATIONS OF INNOVATION

*since 1989

In the late 1980s, milking speed and robustness were the main criteria for choosing milking equipment.

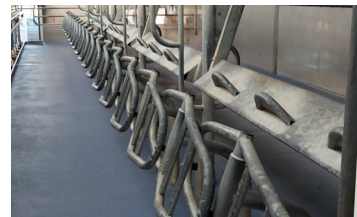

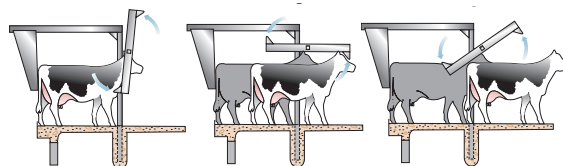

Since then, other factors have become predominant such as animal comfort, milker comfort, etc.

That's why BouMatic is proud to introduce the 3rd generation of the timeless XpressWay.

You and your animals will be in an even more pleasant environment while keeping the unique concept of the Exit Reel that will allow you to ensure a high milking rate.

XpressWay Parallel stall system standard features. When only the Best will do.

- **Milker comfort** – The optimised upper cabinet offers a good view and optimal access to the udder. The milker can be positioned as close as possible to the cow, in an ergonomic position that is perfectly upright and does not interfere with the head. The control panels are also within easy reach.
- **Animal comfort** – Cows will feel comfortable in a wider stall (74 cm). In addition, the sequencing gates have been redesigned to allow more space in the entrance alley. This will also improve cow turning.
- **Exit Reel concept** – BouMatic's parallel XpressWay parlours are all equipped with the Exit Reel; this rotary gate allows faster cow traffic. It rotates smoothly to make it easier for the cows to learn. At the end of milking, the Exit Reel ensures that the cows exit quickly so that the next group can enter immediately.
